LES PAPETERIES DE VIZILLE
VIZILLE PAPER MILLS
SECU-TEC, SECURITY PAPER

> PAPERS ADAPTED TO YOUR SECURITY REQUIREMENTS

Papeteries de Vizille have acquired solid know-how in the manufacture of high-quality specialty paper and applied it to security paper.

Based on our experience, our security products meet the continually evolving requirements for **authentication, verification** and **anti-falsification** required for numerous types of document. Our technical expertise also allows us to provide you with **customised solutions** to your security requirements.

Combining competences and requirements, our production site has benefited from constant technological enhancements, ensuring our **perfect control of the manufacturing process.**

Dandy roll Vizille, diameter 200 mm

Our production cycles, as well as stocks available in certain references, guarantee flexibility in terms of product delivery.

> SECU-TEC, OUR RANGE OF SECURITY PAPERS

Different levels of security can be combined to meet your requirements.

The fibrous composition is also adapted to final use, and can contain up to 100% cotton fibre.

→ THE SECU-TEC RANGE

→ **CHEMICAL SECURITY**
A coloured reaction is revealed on the surface of the paper when a falsification attempt is made with a chemical product.
Applications:
– cheques,
– certificates,
– cheque letters, etc.

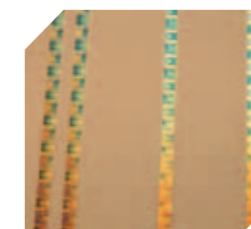

→ **FIBRES OR FLUORESCENT PARTICLES**
Fibres or particles, which are visible or invisible to the naked eye, are inserted in the paper. They become fluorescent under UV light. Different colours, lengths and densities can be produced.
Applications:
– cheques,
– certificates,
– reduction vouchers,
– gift vouchers,
– event tickets,
– stamps,
– tax stamps, etc.

→ **WATERMARK**
Through its unique character and easy visual authentication, the watermark is the most popular and the most difficult to copy in terms of security elements. Whether it's a line mark, a shadow mark or multi-tone, it can be personalised to your brand.
Applications:
– cheques, travellers cheques,
– certificates,
– event tickets,
– reduction vouchers, etc.

→ **INSTANT VERIFICATION**
Authentication of the product is done simply using a pen, which produces a colour reaction on the paper surface (no reaction occurs on any other paper).
Applications:
– certificates,
– reduction vouchers,
– gift vouchers,
– show tickets,
– stamps, labels, etc.

→ **INSERTION OF HOLOGRAMS**
A holographic strip is set on the paper surface. Initially, it allows to authenticate the product through its luminous effects. Since these effects cannot be reproduced by photocopies or scanners, counterfeiting such documents is impossible.
Applications:
– certificates,
– visas,
– event tickets,
– restaurant vouchers, etc.
